

# Corporation Income Tax Returns, 1995

by Lucy Altounian and Nina Shumofsky

The U.S. economy continued its growth, with corporate pre-tax profits, as reported on income tax returns for Tax Year 1995, increasing by 23.7 percent to \$714.2 billion. The \$1.2-trillion increase in corporate sales and other receipts exceeded the \$1.0-trillion growth in deductions, leading to the increase in net income. The number of returns of corporations reporting a profit increased by 2.6 percent to a record 2.5 million, while the profits they reported rose by 19.0 percent to \$880.7 billion. The number of corporations reporting deficits increased by 3.5 percent and, so, corporate net losses increased by 2.6 percent to \$166.5 billion.

The increase in positive net income led to a 14.3-percent increase in "income subject to tax" (the tax base for regular income tax purposes) to \$564.7 billion. This increase, in part, prompted the regular corporation income tax (before tax credits) to increase from \$172.8 billion to \$198.8 billion. Total income tax after credits (the amount payable to the U.S. Government) increased from \$135.5 billion to \$156.4 billion.

## Number of Returns

The estimated number of active corporation income tax returns filed for Tax Year 1995 increased by 3.0 percent to 4,474,167 from the previous year (Figure A). This jump continues the upward trend seen since the end of World War II (excluding Tax Year 1988) [1]. Returns with net income rose by 2.6 percent to a record high of 2,455,492 returns filed, while the number without net income increased, at a rate of 3.5 percent, to 2,018,675.

By industrial division, the total number of returns increased in nearly all of the nine divisions used for Statistics of Income. The most significant increase occurred, for the second straight year, in the services division, which grew by 5.6 percent to 1,504,230 returns. The increase for 1995, however, was significantly smaller than the 23.0-percent increase for Tax Year 1994. The only decline reported was for returns classified in mining, which decreased by 0.7 percent to 35,123.

For those returns that showed a positive amount for net income, four divisions recorded decreases for Tax Year 1995 (Figure B): agriculture, forestry, and fishing; mining; manufacturing; and wholesale and retail trade. For returns without net income, the largest increase was for the wholesale and retail trade division, up 26,204 returns

(5.5 percent) to a total of 506,387.

## Net Income

Pre-tax profits for Tax Year 1995 increased by 23.7 percent to \$714.2 billion, continuing the growth reported since 1992 on corporation income tax returns (Figure C) [2]. This increase in corporate profits reflected continuing national economic improvement [3]. Classified by asset size, returns with total assets of \$250 million or more (0.2 percent of the total) contributed 79.6 percent of total corporate profits.

Both the mining division and the finance, insurance, and real estate division showed increases in pre-tax profits of 51.7 percent. By industrial division, these were the largest percentage increases reported. Though, in 1994, the mining division showed a pre-tax profit for the first time since 1990, the increase in the finance, insurance, and real estate division was in contrast to the 8.6-percent decrease recorded for Tax Year 1994 (Figure C). The \$87.5-billion increase in the finance, insurance, and real estate sector was mainly attributable to regulated investment companies. For this type of corporation, net income (excluding long-term capital gains) increased from \$74.8 billion for 1994 to \$119.1 billion for 1995. The \$1.9-billion increase in the mining division from \$3.6 billion to \$5.5 billion was mainly due to the "crude petroleum, natural gas, and natural gas liquids industrial group." This group, which accounted for 43.2 percent of the increase for the division, showed an increase in profits from \$1.4 billion to \$2.2 billion. Oil and gas field services showed the largest percentage rise. Profits increased by 91.5 percent to \$812.7 million. Overall, all of the industries in the mining division showed increases except for "other nonmetallic minerals (except fuels)."

Profits for the wholesale and retail trade division were down by 7.2 percent to \$63.6 billion. This reduction was in contrast to 1994, when they were up by 37.7 percent. This divisionwide decline was mainly caused by retail trade. While the decline was apparent in many of the retail trade industrial groups, the largest declines were recorded for general merchandise stores, motor vehicle dealers, and apparel and accessory stores. Together, these three groups accounted for 54.1 percent of the decrease and 20.0 percent of the profits for the division. Higher interest rates in the first half of 1995 may have contributed to the slowdown in consumer spending, which led to this decline in net income [4].

Wholesale trade also recorded a moderate decline. The two industrial groups with the largest negative changes were "motor vehicles and automotive equipment" and

*Lucy Altounian and Nina Shumofsky are economists with the Corporation Returns Analysis Section. This article was prepared under the direction of Marty Shiley, Chief.*

<sup>2</sup> Personal Service Corporation returns were excluded for Tax Year 1993. There were 209,770 of these returns included in the Tax Year 1994 estimates.

"electrical equipment." Motor vehicles and automotive equipment decreased by \$0.8 billion to \$1.3 billion, and electrical goods decreased by \$0.8 billion to \$2.7 billion.

After 2 years of 20-30 percent growth in profits, the transportation and public utilities division showed only a 6.8-percent gain for 1995 (from \$68.3 billion to \$72.9 billion). Several industrial groups showed declines in profits, which contributed to the slower rate of profit growth for the division, overall. In communication, "telephone, telegraph, and other communication services"

and "radio and television broadcasting" showed large drops. Together, they declined by \$2.8 billion, from \$30.8 billion to \$28.0 billion. Also showing a large reduction in profits was the trucking and warehousing industrial group, where net income decreased by 35.7 percent to \$3.1 billion. Corporations in this group have been affected by increased competition from the railroad industry [5]. Despite the more moderate growth in profits, several industrial groups did show large increases. The largest increase was for the air transportation group. After

<sup>1</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and S Corporations (qualifying corporations electing to be taxed through their shareholders).

<sup>2</sup> Includes returns not allocable by industrial division.

<sup>3</sup> Personal Service Corporation returns were excluded for Tax Year 1993. There were 209,770 of these returns included in the Tax Year 1994 estimates.

reporting a \$0.5-billion loss for 1994, air transportation reported \$1.9 billion in profits for 1995. Also reporting large gains were electrical services and combination utilities.

The services division also saw a decline in the rate of growth in profits. After a 36.9-percent increase for 1993 and a 40.2-percent increase for 1994, the growth in profits for the services division slowed to 8.0 percent, despite the increase in the number of returns previously mentioned for this group. The decline was led by "other medical services," which include such businesses as blood banks and kidney dialysis centers. Profits for "other medical services" declined by \$3.2 billion to \$2.0 billion (60.6 percent). Auto repair services also dropped to \$0.9 billion (36.5 percent). Contradicting the overall reduction in profits, several industrial groups still showed large growth. The largest increase occurred in business services (except advertising), which increased by \$2.0 billion to \$14.9 billion. Hospitals also increased their profits, from \$1.3 billion to \$2.1 billion.

For Tax Year 1995, net income (less deficit) for manufacturers increased by 19.1 percent, or \$41.8 billion, to \$260.9 billion. Profits for those classified as producers of nonelectrical machinery grew by 95.9 percent to \$10.8 billion. This major industry alone accounted for 25.7 percent of the total increase in profits reported by manufacturers. Significant increases were also realized by other major industries: profits for petroleum and coal producers increased by 53.9 percent to \$27.1 billion; chemicals and allied products increased by 20.1 percent to \$53.0 billion; and paper and allied products increased

by 125.5 percent to \$12.5 billion. By contrast, some manufacturing industry groups reported decreased profits. Motor vehicles and equipment decreased by 54.9 percent to \$7.0 billion, and instruments and related products decreased 22.4 percent to \$8.9 billion.

The 22.1-percent increase in the agriculture, forestry, and fishing division was the result of a 48.3-percent increase in profits to \$1.0 billion reported for non-veterinary agriculture services, which include crop and soil preparation services. This increase was offset by the reduced profits reported by agricultural producers, which fell by 3.1 percent to \$0.6 billion.

### Receipts

Total receipts, defined as the sum of business receipts and investment income, rose by \$1.2 trillion during Tax Year 1995 to \$14.5 trillion (Table 1) [6]. This 8.8-percent increase was consistent with the 8.9-percent growth rate for Tax Year 1994. The growth in total receipts slightly exceeded the \$1.1-trillion growth in total deductions (which include the cost of goods sold). For 1995, the 7,537 returns with total assets of \$250 million or more accounted for 54.9 percent of all receipts. This percentage is similar to the 53.9 percent reported for Tax Year 1994 and was exactly equal to the increase reported for 1993.

Since receipts are related to net income, many of the changes reported in the Net Income section can also be applied to total receipts. For Tax Year 1995, all of the industrial divisions reported an increase in total receipts. Corresponding to the increases for net income, manufacturing and finance, insurance, and real estate showed the

## Corporation Income Tax Returns, 1995

largest increases in total receipts. Two industrial divisions accounted for the majority of the total receipts reported. Manufacturing, which historically makes up the largest part of total receipts, accounted for 31.5 percent of total receipts for 1995, followed by wholesale and retail trade with 29.6 percent. Receipts of manufacturers rose by 8.7 percent to \$4.6 trillion, while those of wholesale and retail trade increased by 6.4 percent to \$4.3 trillion. Within manufacturing, all major industries contributed to the increase, except tobacco manufacturers and leather and leather products manufacturers. The largest increases were for manufacturers of chemical and allied products (\$52.2 billion to \$541.3 billion) and electrical and electronic equipment (\$44.3 billion to \$470.0 billion). In the wholesale and retail division, the largest increases were in retail motor vehicle dealers (\$29.9 billion to \$511.0 billion) and "other retail stores" (\$29.0 billion to \$287.9 billion). "Other retail stores" include businesses like bookstores and jewelry stores.

For Tax Year 1995, business receipts, the largest component of total receipts, totaled \$12.8 trillion, a 7.6-percent increase over 1994 [7]. While this was a record high level, the rate of increase was down from the 9.4-percent increase recorded for 1994. Growth is seen consistently across all industrial divisions.

Between February 1994 and February 1995, the Federal Reserve Board raised the Federal funds rate by 3 percent; thus, for the second year, taxable interest income showed an increase. Taxable interest rose from \$837.2 billion to \$993.2 billion. The 18.6-percent increase almost doubled the 9.5-percent rise reported for 1994 (Table 2). Tax Year 1995 data show that the increase occurred in all industrial divisions, although, as expected, most of the interest is related to the financial industries. For 1995, these institutions reported 84.4 percent of all taxable interest income. Within this division, bank holding companies reported the largest amounts (\$305.2 billion) and also reported the largest increase (\$51.7 billion or 20.4 percent). In addition, taxable interest reported by "security brokers, dealers, and flotation companies" rose by 76.0 percent to \$58.3 billion. Although construction and retail trade had shown declines in 1994, they showed growth in 1995, by 11.5 percent to \$1.9 billion and 2.9

percent to \$12.3 billion, respectively.

Tax-exempt interest (on State and local Government obligations) increased by 4.3 percent to \$46.3 million, after only a 2.6-percent increase for 1994. While many of the industrial divisions showed a decline, the decreases were more than countered by the large increase in finance, insurance, and real estate. Like taxable interest, most tax-exempt interest income was attributable to the finance division (90.5 percent). However, unlike taxable interest, most tax-exempt interest income was reported by regulated investment companies (i.e., mutual funds), rather than by banks. Tax-exempt interest reported by regulated investment companies increased by 8.1 percent for 1995 to \$24.7 billion. This one industry continued to account for about one-half (53.3 percent) of tax-exempt interest overall.

For Tax Year 1994, net short-term capital gains (reduced by net long-term capital losses) fell by \$15.1 billion (57.8 percent) to \$11.0 billion. The 264.5-percent increase to \$40.1 billion for Tax Year 1995 illustrates the fluctuating nature of these short-term transactions. The increase was predominantly seen in regulated investment companies, which reported a \$21.6-billion increase to \$30.1 billion. Net long-term capital gains (reduced by net short-term capital losses) also rose for 1995. This rise contrasted the decline in 1994, which reversed the 2 previous years of growth. For 1995, net long-term gains (excluding those from the regulated investment companies) increased by 27.1 percent to \$60.9 billion. Life insurance companies and bank holding companies shared the largest increases. Growth in dividends received from domestic corporations (those "companies" incorporated in the United States) exceeded growth in dividends received from foreign corporations (those companies incorporated abroad). "Domestic dividends" increased by 72.6 percent to \$22.8 billion, while "foreign dividends" increased by only 16.8 percent to \$35.4 billion. Rental receipts (other than those reported as "business receipts" by certain manufacturers and real estate companies), which had declined for the 3 previous years, increased from \$81.8 billion to \$87.1 billion. The overall increase was fueled by large amounts of growth in both manufacturing and in finance, insurance, and real estate, which increased by \$1.7 billion to \$23.9 billion and by \$3.5 billion to \$40.8 billion, respectively. Despite the overall increase, decreases recurred in wholesale trade, construction, and mining.

### Deductions

For 1995, total deductions increased by \$1.0 trillion, or

**For 1995, the 7,537  
returns with total  
assets of \$250 million  
or more accounted for  
54.9 percent of all  
receipts.**

## Corporation Income Tax Returns, 1995

8.2 percent, to \$13.8 trillion. "Cost of goods sold," typically the largest deduction item, rose by \$0.6 trillion to \$8.2 trillion, or 7.6 percent (Table 2). This growth rate was consistent with the 8.1-percent increase recorded for 1994. The largest percentage gain among the deductions for 1995 was for interest paid, which increased by 21.9 percent to \$744.8 billion. This increase was the second after 4 years of decline. The largest portion of the gain occurred in the finance industries, specifically bank holding companies and "security brokers, dealers, and flotation companies." As Figure D illustrates, both taxable interest income and the interest paid deduction are highly correlated to interest rates (as measured by the prime rate). The average annual prime rate increased after 1993, and interest income and deductions increased accordingly. The finance, insurance, and real estate division accounted for 58.2 percent of interest paid, with bank holding companies responsible for just under half of

that increase. The interest paid deduction reported by bank holding companies, which included interest paid to depositors, as well as loans and mortgages, increased by \$44.7 billion to \$176.7 billion. All divisions reported increases in the interest paid deduction for 1995.

The largest decline among the deduction statistics was for net losses on sales of property other than "capital assets," which decreased by \$3.6 billion, or 11.4 percent, to \$28.0 billion. The largest portion of the drop was from the finance group, specifically savings and loan institutions. The loss on noncapital assets for this industry decreased by \$4.1 billion to \$7.4 billion.

Another declining deduction for 1995 was for bad debts. Although the 1995 decline was small, it continued a trend that began with 1992. For 1995, the bad debt deduction, almost half of which was reported for finance, insurance, and real estate, dropped by 0.1 percent to \$67.8 billion. While there were many increases in bad debts

Figure D

### Interest Income, Interest Paid Deduction, and the Prime Rate, Tax Years 1990-1995

## Corporation Income Tax Returns, 1995

recorded for specific industries, they were offset by large drops in two industry groups: telephone, telegraph, and other communication services, and air transportation. Bad debt deductions for telephone, telegraph, and other communication services declined by 29.3 percent, or \$1.7 billion, to \$4.2 billion. Air transportation fell by 76.0 percent, or \$0.6 billion, to \$0.2 billion. The largest component, the finance, insurance, and real estate industry, increased by 1.3 percent to \$31.6 billion. The largest increases occurred in manufacturing and retail trade.

Continuing the trend that began with 1991, the depreciation deduction (including amounts deducted as part of the cost of goods sold) reported by corporations rose from \$401.6 billion for 1994 to \$436.6 billion for 1995, or 8.7 percent. The Tax Reform Act of 1986 (TRA '86) instituted a "Modified Accelerated Cost Recovery System" (MACRS) that lengthened certain class lives, over which assets could be depreciated for tax purposes, and changed the depreciation methods for business property placed in service after 1986.

### Assets

For 1995, the rate of growth in year-end total assets (book value) reported on corporation income tax returns was up slightly from 1994. The 11.0-percent increase, from \$23.4 trillion to \$26.0 trillion, exceeded its 7.5-percent increase for 1994. The largest percentage increase was for intangible assets, up 18.8 percent. The largest dollar increase was for "other investments," which grew by \$1.2 trillion to a total of \$7.4 trillion (Table 2). (Other investments generally included such items as: long-term non-government investments B stocks, bonds, loans to subsidiaries, and Treasury stocks reported as assets; and certain investments for which no distinction could be made as to their current or long-term nature.) Inventories, the only asset account that exhibited an overall decline, decreased by 7.2 percent.

By industrial division, the largest percentage increase in total assets was for the services division, with an increase of 14.0 percent, or \$116.8 billion. The increase to \$950.7 billion was primarily due to business services (except advertising) and motion picture production, distribution, and services. Business services increased by \$37.4 billion to \$276.8 billion, while motion picture production, distribution, and services increased by \$23.1 billion to \$102.6 billion.

The largest dollar increase in total assets was for finance, insurance, and real estate, up from \$13.9 trillion reported for 1994 to \$15.7 trillion for 1995 (Table 1). As with prior years, total assets were dominated by those

corporations classified in the finance, insurance, and real estate division, which accounted for 60.3 percent of the total increase in total assets for Tax Year 1995. Total assets for finance-related companies (not including insurance, real estate, or holding companies) contributed over half of this division's total assets, or \$8.4 trillion. Bank holding companies, again, reported the largest dollar increase, up \$0.4 trillion to \$4.7 trillion. Regulated investment companies followed, with total assets increasing by \$0.6 trillion to \$3.1 trillion.

Manufacturers posted total assets of \$4.9 trillion, increasing by 9.2 percent from Tax Year 1994. There were a number of large increases reported within this division. Some of these were due to corporations whose principal business activity was the manufacture of motor vehicles and equipment. Total assets for this group increased by \$44.0 billion to \$497.8 billion. Those of

"manufacturing; other electrical equipment" (which includes: manufacturers of motors and generators; and of power, distribution, and specialty transformers) increased by \$55.6 billion to \$392.4 billion.

Net notes and accounts receivables (after subtracting the allowance for bad debts) totaled \$5.2 trillion and represented

**For Tax Year 1995, corporations classified in the finance, insurance, and real estate division accounted for 60.3 percent of the total increase in total assets.**

19.9 percent of total assets for Tax Year 1995, which is consistent with 19.8 percent for 1994. "Other investments" totaled \$7.4 trillion and comprised 28.9 percent of total assets. Gross depreciable assets, which totaled \$5.6 trillion, contributed another 21.4 percent. Net depreciable assets (after deducting accumulated depreciation) accounted for 11.4 percent of total assets for 1995, increasing \$0.1 trillion to \$2.9 trillion. As previously noted, the corresponding depreciation deduction, while different from the depreciation reported on corporations' books of accounts, also increased, due to the relationship these two items share.

Tax-exempt securities grew 18.0 percent to continue the rapid growth exhibited over the 5-year period starting with 1990. The total dollar amount for tax-exempt securities increased from \$711.6 billion for 1994 to \$839.8 billion (Table 2). Correlated to the increases seen in tax-exempt interest, the majority of the large increases were reported for finance, insurance, and real estate, where tax-exempt

## Corporation Income Tax Returns, 1995

investments rose from \$656.0 billion for Tax Year 1994 to \$804.0 billion for 1995, a 22.6-percent increase. The 1995 increase in the rate of growth was mainly attributable to tax-exempt securities reported by regulated investment companies, which increased 22.4 percent, from \$306.3 billion for 1994 to \$375.0 billion for 1995.

Continuing an increase that began with 1992, intangible assets rose 18.8 percent to \$749.2 billion for Tax Year 1995. This continued growth might reflect the 19.6-percent increase in the number of completed mergers and acquisitions observed in 1995 [8]. In general, periods of increased merger and acquisition activity tend to increase the acquisition costs of trademarks, patents, copyrights, and like assets. Since these acquisition costs are properly accounted for as intangible assets, it would follow that the latter would also increase. Manufacturers showed a \$59.9-billion increase in intangible assets to \$379.6 billion, and, alone, accounted for half of the total increase in intangible assets. The drivers of over half of the overall increase were concentrated among companies whose principal activities were in the manufacturing of grain mill products; industrial chemicals, plastics materials, and synthetics; drugs; and periodicals.

Year-end inventories were the only asset account that exhibited an overall decline. Other than for Tax Year 1991, Tax Year 1995 was the first since 1985 for which inventories decreased. Most of the overall decline of \$80.8 billion, from \$1,125.8 billion to \$1,045.0 billion, stemmed from corporations classified in the finance, insurance, and real estate division, whose decline, totaling \$111.0 billion, may be attributable to non-finance subsidiaries. The wholesale and retail trade division also experienced an overall decline totaling \$3.9 billion, from \$486.0 billion to \$482.1 billion.

While these two industrial divisions showed declines, the remaining seven divisions reported increases in inventories. The largest increase among these seven divisions was for corporations classified in the manufacturing division, where inventories increased by \$29.6 billion to \$432.3 billion. Most significant among the increases within this division was that for corporations whose principal industrial activities were electronic components and accessories, which increased by \$2.7 billion to \$24.2 billion, and industrial chemicals, plastics materials, and synthetics, which increased by \$2.3 billion to \$20.5 billion.

### Liabilities and Stockholders' Equity

Corporate indebtedness was reported at \$26.0 trillion for 1995. Short-term debt (accounts payable, mortgages, notes, and bonds payable in 1 year or less, and "other

current liabilities") totaled \$10.6 trillion for 1995, a 10.0-percent increase (up from 6.4 percent for 1994). The 10.0-percent increase in short-term debt was principally due to an increase in "other current liabilities," which increased \$0.6 trillion to \$6.8 trillion. This increase was mainly due to corporations classified in the finance, insurance, and real estate division. "Other current liabilities" for corporations in this division increased \$0.5 trillion to \$5.7 trillion, mostly attributable to bank holding companies. "Other current liabilities" for bank holding companies increased \$0.3 trillion to total \$3.3 trillion. "Security brokers, dealers, and flotation companies" also reported an increase, \$0.2 trillion to \$0.6 trillion.

Accounts payable increased from \$1.6 trillion for 1994 to \$1.7 trillion for 1995. The largest changes occurred for corporations classified in the manufacturing division, which increased by \$55.2 billion to \$556.2 billion, and in the finance, insurance, and real estate division, which increased by \$32.0 billion to \$583.7 billion. Short-term mortgages, notes, and bonds payable increased by \$0.2 trillion, or 11.1 percent, to \$2.0 trillion. This increase was primarily the result of the \$0.1-trillion increase in the finance, insurance, and real estate division to \$1.0 trillion.

Long-term debt (long-term mortgages, notes, and bonds payable, loans from stockholders, and "other liabilities") increased 7.5 percent to \$7.3 trillion (slightly less than the 7.6-percent increase reported for 1994). Long-term mortgages, notes, and bonds payable increased \$0.2 trillion to \$3.3 trillion. The largest changes were found in the finance, insurance, and real estate division, where long-term mortgages, notes, and bonds payable increased \$0.1 trillion to \$1.1 trillion, and for manufacturing, which increased \$75.0 billion to \$982.4 billion. Loans from stockholders, which include intercompany loans among related corporations, increased \$17.4 billion to \$311.7 billion, with the largest increase coming from corporations classified in the manufacturing division. "Other liabilities," which may include deferred or unearned income not reported as part of a current account, increased \$0.3 trillion to \$3.7 trillion. The largest change was, again, for corporations whose principal industrial activity fell in the finance, insurance, and real estate division. "Other liabilities" for this division increased by \$0.2 trillion to \$2.5 trillion for 1995.

Among the equity accounts, paid-in or capital surplus increased \$0.7 billion to \$5.4 trillion, increasing 13.7 percent. The largest increase was noted for corporations classified in the finance, insurance, and real estate division, where paid-in or capital surplus increased \$0.5 trillion to \$3.6 trillion. Specifically, this increase was led

## Corporation Income Tax Returns, 1995

by the \$0.4-trillion increase reported for regulated investment companies, whose paid-in or capital surplus account totaled \$2.8 trillion. The capital stock account increased by only 2.9 percent to \$2.2 trillion for 1995, after having increased by 4.4 percent for 1994, about 8.6 percent for 1993, and 8.1 percent for 1992. The finance, insurance, and real estate and manufacturing divisions reported the largest overall increases for this account.

### Income Tax and Tax Credits

Reflecting the increase in positive net income, "income subject to tax" (the base on which the regular corporation income tax was computed) increased from \$494.0 billion to \$564.7 billion, or 14.3 percent, for 1995. Returns with total assets of \$250 million or more reported \$449.6 billion in positive net income, accounting for 79.6 percent of all income subject to tax for 1995. For most corporations, income subject to tax equaled positive net income minus certain "statutory special deductions" [9]. Overall,

net income increased by 19.1 percent to \$880.7 billion for 1995, while total statutory special deductions increased by 44.2 percent, up from 4.3 percent for 1994, to \$205.2 billion. This resulted in the regular corporation income tax (before reduction by credits) increasing to a record high of \$198.8 billion, or 15.1 percent, over 1994 (Figure E) [10].

Total statutory special deductions increased by 44.2 percent to \$205.2 billion for Tax Year 1995. Approximately 72.0 percent of this increase was due to the deductions for dividends paid by regulated investment companies and real estate investment trusts. Both types of institutions are required to distribute most of their net income to shareholders for taxation. Another 13.1 percent of the \$62.9-billion increase in total statutory special deductions for 1995 came from the \$8.2-billion increase in net operating loss deductions, which totaled \$57.1 billion.

In general, "net operating losses" were the deficits shown in the statistics (excluding those of S Corporations,

Figure E

N/A--Not applicable.

<sup>1</sup> Includes certain other taxes, not shown separately.

<sup>2</sup> For purposes of the statistics, this tax is included in both income tax before credits, total and total income tax after credits. By law, tax credits could only offset regular tax.

<sup>3</sup> Includes certain other credits, not shown separately.

NOTE: Detail may not add to totals because of rounding.

## Corporation Income Tax Returns, 1995

which were allocated to their shareholders), augmented by “unused” portions of the deductions for intercorporate dividends received and for dividends paid on certain preferred stock of public utilities. The net operating loss deduction was limited based on the size of positive net income. Therefore, the increase in positive net income for 1995 may have contributed to the size of the deduction [11]. The most significant changes in the net operating loss deduction were for corporations classified in the manufacturing division, which increased by \$7.9 billion to \$21.4 billion.

Regular tax, which was the tax applicable to most corporations (accounting for 97.4 percent of total tax), can be reduced by tax credits, principally the foreign tax, U.S. possessions tax, nonconventional source fuel, general business, and prior-year minimum tax credits. Regular tax was reported at \$193.6 billion for 1995, an increase of \$26.0 billion (15.5 percent). About half of this increase came from companies classified in the finance, insurance, and real estate division, more specifically, from bank holding companies and life insurance companies.

The largest of all credits, the foreign tax credit, increased by approximately \$5.0 billion, up 19.8 percent, to \$30.4 billion. Most significantly affecting this change was the credit reported on returns classified in the manufacturing division, which increased by \$4.8 billion to \$22.6 billion for Tax Year 1995. Manufacturers classified in the office, computing, and accounting machines and petroleum refining industry groups were the largest contributors to this increase, collectively gaining \$3.3 billion for a total of \$7.8 billion. The credit reported by manufacturers classified in motor vehicles and equipment, however, fell sharply, by \$1,074.1 million, to \$626.0 million.

For 1995, the U.S. possessions tax credit continued to decline, falling to \$3.1 billion, down from \$3.8 billion for 1994. Manufacturers, alone, accounted for 95.4 percent of the total credit claimed, with the drug manufacturing industry responsible for more than \$0.5 billion of this decrease [12].

The “general business credit” decreased by 17.6 percent for 1995, down by \$0.7 billion to \$3.4 billion. This credit included the “investment credit” (for certain capital expenditures still recognized for credit purposes under provisions of TRA ‘86, which otherwise abolished the credit for new acquisitions), as well as the following: jobs credit, credit for alcohol used as a fuel, credit for increasing research activities, low-income housing credit, enhanced oil recovery credit, disabled access credit, renewable electricity production credit, Indian employment

credit, credit for employer Social Security and Medicare taxes paid on certain employees, credit for contributions to selected community development corporations, and “empowerment zone” employment credit, as well as the carryforward of previously unused investment credits [13]. The purpose of the general business credit was to provide a single combined limitation on these component credits and to establish uniform rules for the carryback and carryforward to other years of the unused amounts in excess of this limitation. Each of these component credits was computed separately.

Corporations without current year “alternative minimum tax” (AMT) liability that reported AMT in prior years could elect to take a credit against a portion of regular income tax liability. A corporation’s potential credit amount was based on the size of its prior years’ AMT liability, but its current-year credit usage was limited by its current-year “tentative” AMT. The credit for the prior-year tax increased by 43.6 percent to \$4.8 billion.

For purposes of the statistics, total income tax before and after credits includes regular tax, Personal Holding Company tax, taxes from recapturing prior-year investment or low-income housing credits, AMT, environmental tax, other taxes unique to specific types of corporations, and certain statutory tax adjustments. AMT was the largest of these additional taxes [14]. AMT, although remaining the largest in dollar amount, declined by 4.0 percent for 1995 to \$4.3 billion. A total of 25,834 returns had AMT liability greater than zero.

Total income tax after credits, the amount payable to the Federal Government, increased by 15.4 percent over 1994. The amount due for Tax Year 1995 was \$156.4 billion, up \$20.9 billion. The 7,537 returns of corporations with total assets of \$250 million or more accounted for 81.2 percent of total income tax and 77.9 percent of total income tax after credits for Tax Year 1995.

### Summary

Corporate pre-tax profits as reported on income tax returns for 1995 increased by 23.7 percent from 1994 to \$714.2 billion. The number of returns with net income increased by 2.6 percent. “Positive” net income rose by 19.1 percent to a record \$880.7 billion; “negative” net income (i.e., net losses) increased by 2.6 percent to \$166.5 billion. All industrial divisions showed increases in pre-tax profits, except wholesale and retail trade. Profits of the 7,537 returns with total assets of \$250 million or more accounted for 79.6 percent of the total.

As “positive” net income grew for 1995, so did “in-

## Corporation Income Tax Returns, 1995

come subject to tax,” the base on which the regular tax was computed. This income increased from \$494.0 billion to \$564.7 billion, up 14.3 percent. The increase led to a 15.5-percent increase in the regular income tax (before credits), from \$167.5 billion to \$193.6 billion. Total tax after credits, the amount payable to the U.S. Government, increased by \$20.9 billion, from \$135.5 billion for 1994 to \$156.4 billion for 1995.

### Data Sources and Limitations

Estimates for Tax Year 1995 are based on a sample of corporation income tax returns with accounting periods ending July 1995 through June 1996 that posted to the Internal Revenue Service Business Master File from the beginning of July 1995 through the end of June 1997. These returns represent domestic corporations filing Form 1120 or 1120-A (short form); foreign corporations with income “effectively connected” with a U.S. business filing Form 1120-F; life insurance companies filing Form 1120-L; property and casualty insurance companies filing Form 1120-PC; S Corporations filing Form 1120S; regulated investment companies filing Form 1120-RIC; and real estate investment trusts filing Form 1120-REIT. The 1987 revisions to the Standard Industrial Classification are not reflected in the industry statistics.

A stratified probability sample was used for the statistics, consisting of 97,605 corporation income tax returns drawn from a total population of 4,852,186. Based on the 92,926 active corporation returns in the sample, the population estimate of active corporation returns was 4,474,167. The sample was selected after administrative processing was complete, but before any audit examina-

tions, and was stratified based on combinations of net income and total assets at rates ranging from 0.25 percent to 100 percent.

Because the estimates are based on a sample, they are subject to sampling error. Coefficients of variation (CV's) are used to measure the magnitude of this sampling error. The CV is defined in the section on sampling variability in the “SOI Sampling Methodology and Data Limitations” appendix of this publication. Figure F presents the CV's for total assets, business receipts, total income tax, and income tax after credits by industrial division. The smaller the CV, the more reliable the estimate is judged to be.

### Notes and References

- [1] For Tax Year 1988, the number of returns declined for the first time since the end of World War II. This decline was prompted by the Tax Reform Act of 1986, which caused some companies to be represented in the 1987 statistics twice, by a part-year return and a full-year return, each with an accounting period ending during the span of months July 1987 through June 1988 (the accounting periods comprising Tax Year 1987, for purposes of the statistics). The unusually large number of part-year returns for that year led to a large increase in the total number of returns. The increase in part-year returns was caused by many S Corporations (and Personal Service Corporations) changing their accounting periods from a non-calendar year to a calendar year as required by the 1986 Act. This was

## Corporation Income Tax Returns, 1995

further intensified by the fact that other corporations changed to S Corporation status in order to take advantage of the lower individual income tax rates applicable to S Corporation profits (which are taxed through shareholders) as allowed under the Act.

- [2] Starting with Tax Year 1987, statistics for net income or deficit and for receipts and deductions of S Corporations are limited to those derived “from a trade or business.” Investment or portfolio income (or loss), such as interest, dividends, rents, royalties, and gain (loss) from sales of investment property, and the deductions related to this income were not included in the corporation totals. Therefore, the overall statistics for receipts, deductions, and net income or deficit are slightly understated; it is estimated that total net income (less deficit), alone, is understated by \$22.2 billion as a result (see Wittman, Susan M., “S Corporation Returns, 1995,” *Statistics of Income Bulletin*, Spring 1998, Volume 17, Number 4. ).

These figures also exclude Regulated Investment Company net long-term capital gains.

- [3] The growth rate in the gross domestic product (GDP) for 1995 was 2.0 percent (in constant dollars). (See the U.S. Department of Commerce, Bureau of Economic Analysis, *Survey of Current Business*, June 1997, Volume 77, Number 6, p. D-36)
- [4] *Economic Report of the President*, 1996. Online. Available: <http://www.gpo.ucop.edu/catalog/erp.ct.html>
- [5] U.S. Department of Commerce/International Trade Administration, *U.S. Industry and Trade Outlook '98* McGraw-Hill, 1998, pp. 25-20.
- [6] See Wittman, Susan M., *op. cit.*
- [7] In the finance, insurance, and real estate industries, business receipts included such banking items as fees, commissions, trust department earnings, and service charges that may have originally been reported on attached schedules supporting “other income.” For such companies, these items were included in the statistics for business receipts, not “other receipts.” Similarly, condominium management fees reported by condominium management and cooperative housing associations were included in business receipts, when identified from attached schedules in support of “other income.” Rents

reported by real estate operators and lessors of buildings as their principal income were included in the statistics for business receipts. Premium income of most insurance companies was also included in business receipts. Regulated investment companies and real estate investment trusts do not report business receipts, as such.

- [8] *Mergers and Acquisitions, 1996 Almanac and Index*, March/April 1996, Volume 30, Number 5, p. 37.
- [9] For 1995, statutory special deductions included the following: net operating loss deduction (NOLD); the various dividends received deductions; the deduction for dividends paid on certain preferred stock of public utilities; the deduction for dividends paid by regulated investment companies and real estate investment trusts; the special deduction for taxes paid by real estate investment trusts allowed under section 857; and the special deduction allowed small life insurance companies.
- [10] It should be noted that the statistics for statutory special deductions include: (a) certain unused amounts reported by corporations without net income and, therefore, with no income subject to tax, as well as (b) unused portions attributable to some corporations with net income where the total of these deductions exceeded the amount needed to offset net income. These corporations also had no income subject to tax. In addition, the relationship between net income and income subject to tax was defined differently for life insurance businesses and real estate investment trusts. Therefore, the net income shown in the statistics (which also includes the net income of S Corporations, which was, in general, taxable to shareholders), minus statutory special deductions, will not yield the statistics shown for income subject to tax.
- [11] The net operating loss deduction statistics are only for prior year losses, not previously deducted and “carried forward” to 1995; future-year losses “carried back” as deductions are unavailable.
- [12] The Tax Reform Act of 1976 added the U.S. possessions tax credit to replace the foreign tax credit in order to provide a tax incentive for domestic corporations to invest in Puerto Rico or in U.S. possessions or territories (including American Samoa, Guam, Northern Mariana Islands, and

## Corporation Income Tax Returns, 1995

Virgin Islands).

- [13] The Orphan Drug Credit was not available to corporations for Income Year 1995. It was later reinstated and will appear as part of the “general business credit” for Income Year 1996.
- [14] The alternative minimum tax was designed to ensure that no taxpayer with substantial economic income could avoid significant tax liability through the legitimate use of exclusions, deductions, and credits. AMT is a tax based on a recomputed

income where adjustments (depreciation of tangible property placed in service after 1986, certain amortization, passive activities, and certain loss limitations, etc.) and preferences (depletion, charitable contributions, intangible drilling costs, and certain accelerated depreciation, etc.) are added back to the income base.

\* Estimate should be used with caution because of the small number of sample returns on which it was based.

<sup>1</sup> Excludes Foreign Sales Corporations (Form 1120-FSC) and Interest-Charge Domestic International Sales Corporations (Form 1120-IC-DISC).

<sup>2</sup> Zero assets class includes returns of liquidating or dissolving corporations which had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

<sup>3</sup> Includes returns not allocable by industrial division.

<sup>4</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and S Corporations (qualifying corporations electing to be taxed through shareholders).

<sup>5</sup> For purposes of the statistics, includes not only regular tax, but alternative minimum tax, recapture taxes, and low-income housing credits, and certain other taxes. By law, only regular tax could be reduced by tax credits.

NOTE: Detail may not add to totals because of rounding.

\* Estimate should be used with caution because of the small number of sample returns on which it was based.

<sup>1</sup> Excludes Foreign Sales Corporations (Form 1120-FSC) and Interest-Charge Domestic International Sales Corporations (Form 1120 IC-DISC).

<sup>2</sup> Zero assets class includes returns of liquidating or dissolving corporations that had disposed of all assets, final returns of merging companies whose assets were included in the returns of the acquiring corporations, part-year returns (except those of newly-incorporated businesses), and returns of foreign corporations with income "effectively connected" with a U.S. trade or business (except foreign insurance companies providing separate data for U.S. branches, assets for which are included in the appropriate size class).

<sup>3</sup> Excludes net long-term capital gain reduced by net short-term capital loss of regulated investment companies and S Corporations (qualifying corporations electing to be taxed through shareholders).

<sup>4</sup> Prior to the publication of the Statistics of Income, 1994 Corporation Source Book, Publication 1053, data for "salaries and wages" were included in the totals for "other deductions." The figure shown here is for salaries and wages less employment credits.

<sup>5</sup> Net Income of S Corporations is distributed (with few exceptions) through their shareholders and is taxed as the shareholder's income. This income is not a part of the corporation's income subject to tax.

<sup>6</sup> Also includes deductions for dividends paid by regulated investment companies and real estate investment trusts. These deductions are not shown separately.

<sup>7</sup> See Footnote 3.

<sup>8</sup> For purposes of the statistics, all of the taxes shown below (except the regular tax), plus certain others not shown, are included in both income tax before credits, total and total income tax after credits. By law, tax credits could only offset regular tax.

NOTE: Detail may not add to totals due to rounding.
